SNOMED Coding Manual for Registration Disclaimer

Ce Coding Manual a été établi par la Fondation Registre du Cancer et la Commission d'Anatomie Pathologique pour les laboratoires d'anatomie pathologique, de biologie clinique ou d'hématologie, dans le cadre de leur obligation d'enregistrement comme stipulé à l'art. 138 §2, 3^oa) de la loi coordonnée relative à l'exercice des professions de soins de santé du 10 mai 2015. Il est destiné à servir de syllabus pour la formation, ainsi que de livre de référence, pour les anatomo-pathologistes, et est mis à votre disposition gratuitement.

Le Coding Manual est basé sur les WHO Blue Books et reprend les codes ICD-O mentionnés dans ces ouvrages. Etant donné que la plupart des anatomo-pathologistes francophones codent leurs enregistrements suivant le système SNOMED, les codes morphologiques ICD-O ont été adaptés au format SNOMED et les codes topographiques SNOMED les plus pertinents liés ont été repris.

Ces sélections sont exclusivement destinées à la formation et au soutien de l'enregistrement du cancer par les laboratoires d'anatomie pathologique. Il s'ensuit que le Coding Manual peut uniquement être utilisé en interne. La Fondation Registre du Cancer, avec la Commission, se réserve le droit d'apporter des modifications au Coding Manuel, et de diffuser celui-ci dans le cadre de sa mission légale.

PREFACE

Nous sommes heureux de vous présenter des SHORTLISTS utiles avec les codes SNOMED topographiques et morphologiques les plus relevant. Ces SHORTLISTS ont été réalisées grâce à une collaboration entre la Fondation Registre du Cancer et la Commission d'Anatomie Pathologique.

Ces shortlists, pour lesquelles une attention particulière est portée aux pathologies tumorales, sont basées sur les livres de classification de l'OMS (appelés *blue books*) qui étaient d'application fin 2016. La publication est disponible autant sur papier que sous format électronique et sera mise gratuitement à disposition des pathologistes, des pathologistes en formation et des secrétaires de laboratoires d'anatomie pathologique.

Vous trouverez d'une part des listes de codage classiques avec une sélection de codes T et M, placés par ordre alphabétique et par ordre numérique. D'autre part vous trouverez les listes complétées où certains codes ICD-O-3⁽¹⁾ remplacent ou complètent les codes M SNOMED existants.

Un manuel d'enregistrement utile reprenant les codes topographiques et morphologiques les plus fréquents par organe ou système d'organes est également disponible, celui-ci met l'accent sur les lésions (pré)malignes. De plus, il a été décidé d'une utilisation uniforme de l'anglais, de manière conforme aux *blue books*.

Finalement, la version papier se présente sous forme d'une farde utile permettant de supprimer ou d'ajouter des chapitres, donnant ainsi la possibilité de s'accommoder de manière plus dynamique avec les nouvelles entités, définitions et codes.

Nous remercions tous les pathologistes et non-pathologistes qui ont contribué d'une manière ou d'une autre à la réalisation, validation et diffusion de ce travail.

Nous espérons que ce nouvel exemplaire constituera une aide et un stimulant pour pousser l'enregistrement des diagnostics anatomo-pathologiques à un niveau encore meilleur!

Nous vous souhaitons beaucoup de plaisir dans le codage !

2. Introduction et mode d'emploi résumé

Dr. Mia Slabbaert, Kris Henau

1. La collaboration entre le Registre du Cancer et les pathologistes est un devoir légal

Le pathologue est légalement⁽¹⁾⁽²⁾ tenu de coder, d'enregistrer et de faire parvenir au Registre du Cancer le rapport complet et les résultats des recherches ayant mené au diagnostic de malignité ou ayant servi pour le dépistage précoce du cancer. En tant que laboratoire d'Anatomie Pathologique, la collaboration est également nécessaire pour obtenir et maintenir un agrément⁽³⁾.

En outre, le pathologue est libre de coder et d'enregistrer d'autres diagnostics pour son propre usage.

La Commission d'Anatomie Pathologique et le Registre du Cancer soutiennent et facilitent l'utilisation des codes CODAP et SNOMED pour le codage tant de l'organe étudié que du diagnostic anatomopathologique. Le manuel suivant explique seulement l'utilisation des shortlists SNOMED.

Règle de codage générale importante

Veuillez utiliser, pour chaque lésion devant être envoyée au Registre du Cancer, **au moins une fois la combinaison d'un code topographique et morphologique au format SNOMED**. Faites cela de la manière la plus spécifique possible. Le Registre du Cancer est informé que les pathologistes souhaitent parfois coder les localisations tumorales ou les diagnostics de manière interne plus précise que les codes repris dans les shortlists. Veuillez alors de préférence utiliser les codes SNOMED existants, même si ils ne se retrouvent pas dans les shortlists.

Les « codes maison » peuvent être ajoutés, mais veuillez alors coder une ligne supplémentaire avec le code SNOMED le plus correct possible pour que le Registre du Cancer puisse traiter le cas de la meilleure façon.

2. SNOMED en deux parties

Afin de rendre le codage facile et correct, deux parties distinctes ont été prévues : un manuel d'enregistrement et un livre de codes.

Le **livre de codes** contient une sélection de codes T et M et est idéal à utiliser dans le cadre des pathologies tumorales. Etant donné que les shortlists sont destinées à faciliter l'enregistrement du cancer, seul un nombre très limité de codes M sont inclus pour les pathologies non-tumorales.

Les codes topographiques et morphologiques ont été organisés à la fois de manière alphabétique et de manière numérique selon le code. Pour rendre la recherche alphabétique plus simple, certains codes sont repris plusieurs fois dans les listes. Exemples :

T-72020 Kidney, pelvis, left	M-85503 Acinar adenocarcinoma
T-72020 Renal pelvis, left	M-85503 Acinar cell carcinoma
	M-85503 Acinic cell carcinoma
	M-85503 Adenocarcinoma, acinar
	M-85503 Carcinoma, acinar cell
	M-85503 Carcinoma, acinic cell

¹ Loi portant sur diverses dispositions relatives à la santé du 13 décembre 2006, article 39. Moniteur belge. 22 décembre 2006.

² Loi portant sur diverses dispositions relatives à la santé du 19 mai 2010, article 29. Moniteur belge. 2 juin 2010.

³ AR relatif à la reconnaissance des laboratoires d'anatomie pathologique du 5 décembre 2011. Moniteur belge. 13 février 2012.

De plus, le livre de codes a été complété avec des listes comprenant des codes morphologiques ICD-O-3 qui complètent des codes M SNOMED existants ou qui remplacent des codes SNOMED obsolètes. Certains de ces codes ne sont pas encore reconnus comme codes ICD-O-3 officiels mais sont déjà fournis par l'OMS comme codes à être utilisés à l'avenir. Nous acceptons déjà l'utilisation de ces codes, et nous les convertirons momentanément (jusqu'à la sortie officielle) vers les codes ICD-O-3 officiels correspondant le mieux.

Le **manuel d'enregistrement** contient les codes topographiques et morphologiques par organe et système d'organes. Ces listes sont principalement inspirées des *blue pages* des livres de classification de l'OMS et mettent l'accent sur les codes importants pour l'enregistrement des lésions (pré)malignes. Les codes topographiques pour les ganglions lymphatiques régionaux correspondants ont pour cette raison également été ajoutés. De plus, chaque chapitre fait référence à l'édition du *blue book* sur base duquel il a été développé.

Codes topographiques (codes T)

- La **latéralité** est une donnée importante pour l'enregistrement du cancer (notamment dans le cadre des tumeurs multiples). Dans la mesure du possible, les codes qui présentent une latéralité, ont été indiqués. Pour dissuader l'utilisation des codes aspécifiques qui ne comprennent pas de latéralité, ceux-ci ont été notés dans une teinte plus claire.

Salivary glands	NOS	Left	Right
Parotid gland	T-61100	T-61120	T-61110
Submandibular gland	T-61300	T-61320	T-61310
Wharton duct	T-61330	T-61330	T-61330

Cependant, pour quelques organes il n'existe pas de code topographique SNOMED officiel qui reprend la latéralité. Si vous le désirez, vous pouvez toutefois ajouter une variable supplémentaire pour communiquer la latéralité.

- Les codes T permettent, pour beaucoup d'organes, de coder sans ambiguïté la base de diagnostic (**cytologie vs histologie**). Ceci est, entre autres, d'une grande importance pour l'interprétation des résultats obtenus dans le cadre de la détection précoce du cancer du col de l'utérus et donne plus d'informations sur la fiabilité du diagnostic.
- Afin de fournir un maximum d'informations, il est possible, pour une même tumeur/spécimen de résection, de livrer plusieurs codes topographiques, à chaque fois en combinaison avec un code morphologique.
- Dans certains cas, il est possible d'utiliser des codes SNOMED officiels encore plus spécifiques que ceux mentionnés dans le manuel d'enregistrement. Cela est bien sûr toujours possible mais les codes mentionnés dans le manuel suffisent pour répondre aux normes de qualité de l'enregistrement du cancer.

Codes morphologiques

- Les codes morphologiques ont reçu un code couleur qui indique s'il s'agit une lésion invasive, *in situ*, borderline ou bénigne. La couleur réfère parfois à un type tumoral spécifique comme les carcinomes ou les tumeurs neuroendocrines.

Invasive carcinomas	(Neuro)endocrine tumour/carcinoma (NET/NEC)
In situ malignancies	Benign/borderline lesions
Other malignancies	Additional codes

- Afin de fournir un maximum d'informations, il est possible, pour une même tumeur/spécimen de résection, de livrer plusieurs codes morphologiques, à chaque fois en combinaison avec un code topographique.
- Lorsque c'est possible, il est important de spécifier s'il s'agit d'une **tumeur primaire** ou d'une **lésion métastatique**. **Les codes pour les lésions métastatiques ne sont pas repris explicitement dans le manuel d'enregistrement.** Vous pouvez **changer le dernier chiffre du code que vous utiliseriez pour traduire le type tumoral vers 6**, ce qui signifie qu'il s'agit d'une lésion métastatique. Exemples :

Tumourtype	Primary tumour	Metastatic lesion
Acinic cell carcinoma	M-85503	M-85506
Adenocarcinoma, NOS	M-81403	M-81406
Adenoid cystic carcinoma	M-82003	M-82006

Ceci fait partie du **MATRIX-concept**, c'est-à-dire que le dernier chiffre du code morphologique à partir du code **M-80000** traduit le comportement de la tumeur : **0 = bénin ; 1 = borderline ; 2 = in situ ; 3 = malin ; 6 = métastatique.**

- **Certains codes morphologiques réfèrent à des descriptions multiples.** Parfois il s'agit de *synonymes*, mais il se peut qu'il s'agisse de *termes ayant un rapport l'un avec l'autre* pour lesquels l'OMS n'a pas prévu de code morphologique distinct.

Exemple :

Etant donné que l'OMS n'a pas prévu de codes distincts pour les entités suivantes, le code M-94003 est à utiliser tant pour

- ➔ *Diffuse astrocytoma, IDH-mutant*
- ➔ *Diffuse astrocytoma, IDH-wildtype*
- ➔ *Diffuse astrocytoma, NOS*

Si vous souhaitez, pour un usage personnel, tout de même utiliser un code différent pour chacun de ces trois diagnostics, c'est possible via un « code maison ». Cependant, rappelez-vous de noter également le code SNOMED M qui est spécifique à l'enregistrement du cancer.

3. Recherches dans le cadre du diagnostic précoce des cancers du col de l'utérus/sein/colon

Nous référons ici aux **bulletins d'information spécifiques** préparés par la Fondation Registre du Cancer en collaboration avec des équipes composées de pathologistes. Vous y trouverez des lignes directrices claires afin d'assurer un enregistrement de qualité.

Ces bulletins d'information sont disponibles sur papier et sous format électronique sur le site web de la Fondation Registre du Cancer (www.registreducancer.org).

Les SHORTLISTS SNOMED 2017 sont disponibles gratuitement sous format électronique sur le site web du Registre du cancer via www.registreducancer.org.

Un exemplaire papier gratuit peut être obtenu en envoyant un mail à info@registreducancer.org.

Tout commentaire, suggestion, errata, question... sont les bienvenus via mail à info@registreducancer.org.
