

Belgian Cancer Registry

CANCER FACT SHEET 2023

MELANOMA

ICD-10 C43

CONCEPTS AND ABBREVIATIONS

Absolute numbers (N): The number of newly registered cancer diagnoses observed for a given period of time. All figures and numbers in this cancer fact sheet are based on diagnoses of Belgian residents.

Average Annual Percentage Change (AAPC): The average relative change in incidence risk from one year to the next. For example an AAPC of 1.05 (a 5% increase) applied to a cancer risk of 200/100,000 results in a risk of 210/100,000 one year later ($=200 \times 1.05$) and 255/100,000 over 5 years ($=200 \times (1.05)^5$).

Crude Rate (CR): The crude rate is obtained by dividing the absolute number of diagnoses (N) by the corresponding population size at risk (N/100,000).

ESR2013: Incidence rates standardised to the 2013 revised European Standard Population (ESP): Standardisation is necessary to accommodate for differences in population size and age distribution (over time or among regions). An important factor in interpreting trends in cancer incidence is population ageing, as cancer is an age-dependent disease. For a higher proportion of elderly people in the population, a higher total number of cancer diagnoses can be expected for the same cancer risk. When only absolute numbers (N) or Crude Rate (CR) results are used, a misleading picture of the actual changes in the risk of a cancer diagnosis could be obtained. Therefore, direct standardisation is necessary to evaluate the evolution of the risk of cancer diagnosis over time or among regions.

Net survival: Often also called the relative survival, is an estimate of the survival probability when other causes of death beside the cancer type(s) under study are excluded. As examples of other causes of death, patients with the cancer type(s) under study could also die because of an accident or unrelated cardiac conditions, etc. Net survival may exceed 100%, this occurs when the observed survival probability for patients with the cancer type(s) under study is higher than the one for the matched general population (no excess mortality due to cancer).

The net survival estimation was based on the regional lifetables 2023, obtained from Statbel.

Stage: Cancers are reported with a stage, labelled with a Roman numeral with IV being the most advanced stage. Stage is based on the T-category (extent of the tumour), the N-category (absence or presence and extent of the regional lymph node metastasis) and the M-category (absence or presence of distant metastasis). Stage is reported as clinical and pathological stage and as a combination of both clinical and pathological stage with priority given to the pathological stage. Clinical information about distant metastases (cM) will always be taken into account, and in case of neo-adjuvant therapy, priority is given to the clinical stage. If stage is unknown, not applicable or not submitted to the Belgian Cancer Registry, the stage is reported as 'unregistered stage'. Stage is reported according to the TNM 8th edition: J.D. Brierley, M.K. Gospodarowicz, Ch. Wittekind. TNM Classification of Malignant Tumours, 8th edition: UICC, 2017.

95% CI: 95% Confidence Intervals are indicated with a shaded band or whiskers in the figures. The 95% CI is a range of values that has 95% chance to contain the true mean value.

1. CANCER INCIDENCE	5
1.1. Melanoma incidence: by region.....	5
1.1.1. Melanoma incidence by region and sex: number of new diagnoses, age-specific, crude and age-standardised incidence rates, 2023.....	5
1.2. Melanoma incidence: by tumour stage	7
1.2.1. Melanoma incidence by clinical stage (cStage), sex and age group: number of new diagnoses, crude and age-standardised incidence rates, 2023	7
1.2.2. Melanoma incidence by pathological stage (pStage), sex and age group: number of new diagnoses, crude and age-standardised incidence rates, 2023	7
1.2.3. Melanoma incidence by stage, sex and age group: number of new diagnoses, crude and age-standardised incidence rates, 2023.....	8
1.2.4. Melanoma incidence by sub-location, stage, sex and age group: number of new diagnoses, crude and age-standardised incidence rates, 2023	9
1.2.5. Melanoma incidence by pT sub-categories, sex and age group: number of new diagnoses, crude and age-standardised incidence rates, 2023	11
2. CANCER INCIDENCE TRENDS	12
2.1. Melanoma incidence trends: by region	12
2.1.1. Melanoma incidence trends in males, by region: number of new diagnoses, crude and age-standardised incidence rates, including average annual percentage change, 2004-2023	12
2.1.2. Melanoma incidence trends in females, by region: number of new diagnoses, crude and age-standardised incidence rates, including average annual percentage change, 2004-2023	14
2.2. Melanoma incidence trends: by tumour stage	15
2.2.1. Melanoma incidence trends by stage and sex: number of new diagnoses, crude and age-standardised incidence rates, 2019-2023, including average annual percentage change from 2004 onwards	15
2.3. Melanoma incidence trends: by age group	17
2.3.1. Melanoma incidence trends in males, by age group: number of new diagnoses, crude and age-standardised incidence rates, including average annual percentage change, 2004-2023.....	17
2.3.2. Melanoma incidence trends in females, by age group: number of new diagnoses, crude and age-standardised incidence rates, including average annual percentage change, 2004-2023.....	18
3. CANCER PREVALENCE	19
3.1. Melanoma prevalence: by region	19
3.1.1. Melanoma prevalence by region and sex: number of prevalent cases, crude and age-standardised prevalence rates on 31/12/2023.....	19
4. CANCER SURVIVAL.....	20
4.1. Melanoma survival: by region.....	20
4.1.1. Melanoma survival by region, sex and age group: number at risk and net survival probabilities, 2014-2023	20
4.2. Melanoma survival: by tumour stage.....	22
4.2.1. Melanoma survival by clinical stage (cStage) and sex: number at risk and net survival probabilities, 2014-2023	22
4.2.2. Melanoma survival by pathological stage (pStage) and sex: number at risk and net survival probabilities, 2014-2023.....	23

4.2.3. Melanoma survival by stage and sex: number at risk and net survival probabilities, 2014-2023	24
5. CANCER SURVIVAL TRENDS.....	25
5.1. Melanoma survival trends: by tumour stage	25
5.1.1. Melanoma survival trends by stage and sex: number at risk and net survival probabilities, 2004-2023.....	25
6. CANCER MORTALITY	27
6.1. Melanoma mortality: by region	27
6.1.1. Melanoma mortality* by region and sex: number of cancer deaths, age-specific, crude and age-standardised mortality rates, 2021	27
7. CANCER MORTALITY TRENDS.....	29
7.1. Melanoma mortality trends: by region.....	29
7.1.1. Melanoma mortality* trends in males, by region: number of cancer deaths, crude and age-standardised mortality rates, including average annual percentage change, 2004-2021	29
7.1.2. Melanoma mortality* trends in females, by region: number of cancer deaths, crude and age-standardised mortality rates, including average annual percentage change, 2004-2021	31

1. CANCER INCIDENCE

1.1. Melanoma incidence: by region

1.1.1. *Melanoma incidence by region and sex: number of new diagnoses, age-specific, crude and age-standardised incidence rates, 2023*

*Mortality statistics in Belgium are collected and managed by the three Regions (Flemish Region: Departement Zorg; Brussels-Capital Region: Observatorium voor Gezondheid en Welzijn van Brussel-Hoofdstad/ l'Observatoire de la Santé et du Social de Bruxelles-Capitale; Walloon Region: Agence Wallonne de la Santé, de la Protection sociale, du Handicap et des Familles (AVIQ)). The Directorate General Statistics Belgium is responsible for collecting and merging the data coming from the regional agencies. Mortality data used in this cancer fact sheet are collected from the Directorate General Statistics Belgium and encompasses the period 2004-2021.
